Abstract

The discovery of written literature from the turn of the twentieth century startled me, even as a skilled librarian. Besides the stated contents, the author's voice, the structure of the text inside, the page count, and the quality of the information offered about the books all play a role in my selection process. I have taken note of the many different types of book descriptions and the many different sources used for their content. The volumes include information from a broad range of sources, of wildly varying quality.

Keywords: Hindi language, library, information science books, skilled librarian

Introduction

In India on Library and information science books are primarily published in English Language. At the same time a sizeable number of books are published in the Hindi Language. As many state universities and the Indira Gandhi National Open University offers Library and information science courses in Hindi Language.

In Maharashtra most State Universities of allow to write answer of Library Science courses in Marathi Language. Allow the Yashwantrao Chavan Maharashtra Open University offers B. Lib and M. Lib Courses in Marathi Language. As result quite many books are published in Library and information science in Marathi language.

Considering this scenario the present researcher intended to find the number of books published on Library and Information science in India. In recent time (i.e. 2001 to 2020) in English, Hindi, and Marathi Language. The researchers further intended to analyses this publication with various aspect. A descriptive bibliography will be an outcome of this research,

In reference to literary works, the word "bibliography" may mean a few different things:

- Library cataloging is the act of keeping track of books, manuscripts, and other publications by numbering and organizing them into lists accord to their author, title, edition, and imprint.
- A bibliography is an annotated and arranged list of sources that share certain common themes or topics. Therefore, there are a variety of citation styles to choose from.
- **General:** Not confined to a certain writer, field, geographical region, or time frame.
- **Author:** An annotated bibliography of a single author's works.
- **Subject:** Limited to a certain area of study.
- **National or Regional:** Includes information specific to

certain nation or geographical area.

- **Trade:** Aimed at the publishing industry and providing resources for bookselling.
- It is the scholarly investigation of printed and handwritten texts with the intention of establishing or confirming data such as their origin, publication date, page count, authorship, and linguistic content.

Either all articles in a certain area are included in the bibliography or just those that satisfy particular criteria are included. Either just descriptive information or critical comments will be included in the annotation.

Bibliography Overview

Bibliography is one of the fundamental components of Library and Information Science. It is the systematic identification, description, and organization of recorded documents such as books and other information resources. Bibliography plays a vital role in bibliographic control by enabling users to identify, locate, and access published literature efficiently. It serves as an essential tool for librarians, researchers, students, and scholars in locating relevant information and avoiding duplication of research.

Conclusion

This an overview of bibliography and its significance in the organization and dissemination of recorded knowledge. It discussed the meaning, historical development, objectives, functions, and various types of bibliography, with particular emphasis on descriptive bibliography. The chapter also highlighted the importance of bibliography in bibliographic control, library services, research, & scholarly communication. Furthermore, it explained the relevance of bibliographic standards and their application in preparing accurate and

reliable bibliographic records. The discussion provides the conceptual and theoretical foundation for the present study and forms the basis for the preparation of a comprehensive descriptive bibliography of Library and Information Science books published in India during the period 2001-2020.
